

Building the End-to-End AI Ecosystem

From Infrastructure to Intelligent Agents — Connecting Global AI Technology with Local Partners

COMPANY PROFILE

“Eco” means Ecosystem

EcoTech helps AI technology companies expand into overseas markets. We connect software and hardware, and partner with local players on the ground — together building an AI ecosystem that truly takes root.

One Ecosystem, Four Layers Deep

Data Center · Server · LLM · Agent — EcoTech delivers a complete portfolio from the ground up.

Overseas Expansion

We help AI technology companies enter and grow in new markets.

Software + Hardware

We connect the full technology stack, not just one layer of it.

Local Partners

We work with on-the-ground partners to make deployment real.

OUR APPROACH

An End-to-End AI Ecosystem, Layer by Layer

To build a real AI ecosystem, EcoTech provides a complete product portfolio — from the foundational infrastructure to the intelligent applications running on top of it.

AI Data Center

Power system & Cooling system

Servers

AI & traditional server hardware

Large Language Models

Open & closed-source model access

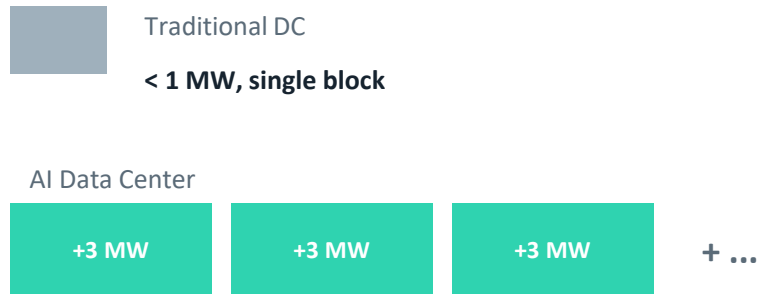

Agents

Intelligent products that get work done

AI Data Center

Why power density changes everything

3 MW is the traditional UPS/breaker building block. AI facilities scale by adding more of it as GPU rack demand grows — 3, 6, 9 MW and beyond, not one fixed size.

That modular, ever-growing power demand means: heavier electrical load to manage, more heat to remove, and greater risk if the grid drops. That is exactly the gap our four product lines close.

UPS + Battery

Reliable backup power for heavier, more critical loads

Precision Air Conditioning (PAC)

Removes the extra heat that high-density racks generate

Generator Sets

Continuity when the grid fails — the stakes are higher now

We sell the power and cooling backbone that scales with the facility, block by block.

Servers

With power and cooling in place, the next layer is the hardware that actually runs AI workloads.

AI Server

GPU + NPU + CPU

Traditional Server

CPU only

We sell both — matched to what each workload actually needs.

A global chip & memory shortage

NVIDIA leads GPUs; Huawei leads AI accelerators (Ascend NPUs); Samsung leads memory — all in constrained supply. We sell the servers built around them, so this scarcity still shapes what we can deliver.

Server brands in the market

Leading server brands available in today's market.

● Dell

● HP

● Supermicro

● Gigabyte

● Huakun

Large Language Models

Hardware needs a brain. This is where AI compute becomes AI capability.

Closed-Source

Claude · Gemini · OpenAI · Doubao

Each is tied to one cloud: AWS—Claude, GCP—Gemini, Azure—OpenAI. Great for API use, but not available for private deployment.

Open-Source

Qwen · DeepSeek · GLM · Kimi

Not locked to one cloud — can be self-hosted for free on infrastructure the client controls. Note: several open-source families (e.g. Qwen, DeepSeek) also ship a closed-source hosted version of the same model.

The key insight

Because closed-source models are bound to a single cloud, they can't be privately deployed. So when a client needs on-premise or private deployment, what we actually sell is open-source model deployment and integration — not the model itself.

Three ways to buy tokens for closed-source models

Open-source is free to self-host — these channels are for paid, closed-source access.

1

Direct from the model provider

2

Via OpenRouter

3

Via a cloud provider

Agents

The model becomes useful once it can act. An agent turns one instruction into a finished workflow.

Example: User says, "I want to buy clothes"

Open Shopping App

Reads purchase history, search history & OOTD

Auto-recommends and prepares the order

Human confirms payment

Our five agent scenarios

MyVoice.AI

AI contact center

Yusys Technologies

Vibe coding agent

AI Transcend

Customer engagement agent

TalkCloud

Online class platform

RivereTech

Credit card, risk control & agent platform

OUR PARTNERS

Working Across the Full Stack

EcoTech partners with leading names at every layer we sell — from data center hardware to applications.

OUR VISION

Beyond Reselling — Toward Our Own Agent Platform

The four-layer portfolio is not the destination — it is how we get there.

Every product we sell today builds the experience, relationships, and knowledge that get us there — one step at a time.

Thank You

EcoTech — Connecting AI Infrastructure to Local Ecosystems
